

4. SUMMARY

Eight spent AN-M69 incendiary bomblets were discovered during a walk-down of the southwestern flank of the Middle Butte at the INL. The walk-down was performed in accordance with the Phase I O&M Plan (DOE-ID 2004) as a follow-up to a reported sighting of UXO in the vicinity. The explosive ordnance disposal experts present during the walk-down determined that the bomblets no longer contained any of the incendiary filling; therefore, they did not pose an imminent risk to either individuals or the environment. Based upon this evaluation, no action was taken to remove or dispose of the materials.
